Technical information

Productnumber : 62KLS-200801-T

Product description

Durable plastic (PE Mix) bulkheads with ribbed grip structure suitable for both light and heavy equipment to protect the surface, temporary hardening and better accessibility. Made from 100% recycled post-industrial plastic, they are therefore ideally suited for repeated use over a long period of time. The bulkheads can be used on lawns, streets and construction sites. Due to the flexibility of the plastic, these plates move with the surface and therefore cause less damage. The plates are lightweight, virtually indestructible and prevent you from getting stuck in a swampy terrain with heavy traffic. The ribbed structure on the top provides maximum grip during heavy transport. The 15 mm thick plates can be loaded with a maximum of 45 tons. Full trucks, aerial work platforms and small crawler cranes are therefore no problem!

Additional options:

- Handles
- Milled icon and/or company name
- A colored top layer in your company color
- Text ribbon in color with your name, logo, etc.

Specifications

Article arrangement: New

Version: floor panel 45000 kg

Colour: black

Width (mm): 800

Loading capacity (kg): 45000

EAN Code (Gtin) 8719424162516

Type: plastic baffle

Material: PE

Length (mm): 2000

Height (mm): 15

Type number: 62KLS
