## Technical information Productnumber : 48-8583

## **Product description**

This plastic drip tray offers space for two IBC containers and is equipped with a grid bottom. The collection tray is made of high-quality PE. As a result, the drip tray has a high resistance to chemicals. The capacity of the drip tray is 1100 liters and recesses in the bottom make it easy to move with a forklift or pallet truck.

A storage facility must be constructed in such a way that leaked or spilled hazardous liquid is collected in a container. To this end, the collection container must have a capacity of at least 110% of the largest package. However, if 10% of the total content of the packages is more than 110% of the content of the largest package, then the collection capacity must be equal to 10% of the total content of the packages together. The collection container must be sufficiently resistant to the stored liquids.

The collection capacity only applies to liquids. Empty, uncleaned packaging does not count. The collection facility may also be realized in storage. The choice of location for the collection facility may depend on the hazardous liquids stored. Kruizinga.nl is not liable for the type of use!

Please note! Any form of modification is not allowed. If this is the case, all regulations will lapse.

## Specifications

Article arrangement: New Version: grid floor Floor: oil- and water tight Colour: black Width (mm): 1450 Loading capacity (kg): 4000 Weight (kg) 120 Additional specifications: excl. bins
