Product description

A used shelf rack with dimensions 3200x600x2000 mm is a type of storage system used for efficient storage of goods. The shelves are treated with a hot-dip galvanized zinc coating, which protects the material from corrosion. This makes the storage rack durable and suitable for use in environments where exposure to moisture or other weather conditions are possible. Divided into three sections. This allows for organized storage of different types of goods and easy access to specific items. Each section of the shelf rack has five shelves. The shelves in the shelf rack are removable and height adjustable. This provides flexibility when storing goods of different sizes. It also makes it easy to clean or adapt the racking to changing storage needs. Suitable for use in a variety of environments, including warehouses, archives, workshops, and stores.

One set includes the following:

- 8x 200cm uprights
- 15x shelves of 105x60 cm
- 30x supports of 60 cm

Specifications

Article arrangement: Used

Version: complete with accessories

Subgroup: Shelving used

Surface treatment: galvanised with signs of use

Internal width (mm): 1010

Depth (mm): 600

Type number: 8066GB

Type: static shelving rack

Material: steel

Shelves: adjustable in height

Width (mm): 3200

Height (mm): 2000

Internal depth (mm): 520

EAN Code (Gtin) 8719424235593
